

Mountain Province State Polytechnic College Commits to Green Future on Earth Day 2024 with "Green Building and Retrofit Advocacy"

WE'RE BUILDING A GREENER FUTURE!

Mountain Province State University is committed to aligning our campus with our climate goals.

Through the

GREEN BUILDING AND RETROFIT ADVOCACY,

we pledge that all new university constructions will be built to be energy-efficient from their inception.

We further commit to the systematic, long-term upgrading and retrofitting of our existing buildings to ensure a sustainable and responsible campus for the future.

HAPPY EARTH DAY
APRIL 22, 2024

MPSU announced its formal commitment to the Green Building and Retrofit Advocacy. The announcement was made in celebration of Earth Day 2024, underscoring the University’s dedication to sustainability and climate action.

The MPSU Commitment to the Green Building and Retrofit Advocacy marks a pivotal step in its efforts to create a more sustainable campus. “Mountain Province State University is committed to aligning our campus with our climate goals,” stated Dr. Edgar G. Cue, University President, during the Earth Day ceremony. The event was also attended by key officials, including Dr. Arel B. Siaed, Bontoc Campus Executive Director.

This comprehensive advocacy mandates that **all new constructions will be built to be energy-efficient** from their inception, ensuring sustainable design from day one. Concurrently, the University commits to the systematic, long-term upgrading and retrofitting of its

existing buildings. This crucial initiative will transform current structures to enhance their energy performance, reduce waste, and modernize them for a greener future.

"This Earth Day, we are not just talking about environmental responsibility; we are taking concrete action," Dr. Cue added. *"This commitment ensures that our physical campus will reflect our dedication to sustainability... creating a healthier environment for our students, faculty, and the wider community."*

MPSU's official announcement poster for its "Green Building and Retrofit Advocacy," launched on Earth Day 2024 to align the campus with climate goals.
